

Riichi Mahjong Player Guides and Unicode Tile Characters

Mahjong Styles

- There are many styles or varieties of mahjong.
- They developed as the game spread across many continents and countries
- This guide is for Japanese style “*Riichi*” (pronounced “reach ee”) mahjong.
- It uses Japanese terminology which may be different from guides for other styles.
- It follows the World Riichi Championship (WRC) rules <https://worldriichi.org/wrc-rules/>

Mahjong Tiles

- Mahjong is played with tiles (*pai*, pronounced “pie” in Japanese)
- There are 136 tiles used in *riichi* mahjong
- Organized in 3 numeric suits of 1-9 plus & “honor” tiles
- There are 4 copies of each tile
- Most sets have 8 additional tiles that are used for variants
- There are unicode characters for all of the tiles

These are the 5's from the 3 suits. The red tiles are used in a variant game as bonus tiles.

Dora – Bonus Tiles

In each game, at least one tile is marked as a bonus tile, *dora*. Players who win with a bonus tile in their hand get more points.

The *dora* indicator shows the tile *preceding the dora*. The next tile in sequence is straightforward to determine for numeric tiles in the 3 main suits. If the indicator is the 9 of a suit, the *dora* is the 1 of that suit. For the winds, the sequence is the same as the order that players take turns around the table. For the color tiles, they go in alphabetical order by their English names: green, red, white.

Player Guides

- The next slides are player guides. The first 2 slides are designed to be printed (double sided) as a square that can be laid at the middle of the mahjong table.
- They show the player sequence and *dora* sequences on one side and the scoring tables on the other side.
- They should be printed at a scale that matches the width of 6 mahjong tiles for the set so that it's easy to arrange discards in rows of 6 tiles each in front of each player.
- The next 2 slides can also be printed double sided as a “cheat sheet”. One side is the list of hands (*yakus*) and their *han* values, and the other has the rules for mini-points (*fu*) and scoring tables.
